

## CIAM Education S/C report 2018

The Education SC has been in contact via E-mail during the year discussing some matters described here.

We discussed the amount of the scholarship. Its maybe time to increase the amount ? We stayed now many years with 2000 Euro. Inflation and the value of money could indicate that maybe we should increase the scholarship some.

We also discussed to make some instructions for the Scholarship Evaluation experts. A draft has been sent around, but we are not ready with the work yet.

Our FB page is up and alive, "CIAM Education". We have some interesting posts from many countries about aviation used in education and posts with great junior programs and junior work. Please all reading this, try to help us spread the message and our link on FB to interested parties.

We continued our discussion about "Good examples with the work with juniors". How to make them visible, we talked about posting them on some spot at the CIAM web page. The idea seems good, but we so far didn't take any steps to solve this in reality, the work continues.

We had some discussions about how we can contribute in the next WAG in Turkey. Some interesting ideas have come up during the discussions, promotion events with simple electric gliders is one of the ideas.

We opened last year a discussion on how we can work together with the drone class to try to involve more youngsters in our sport. There is enormous potential that we could use drones in education in the future. Lots of countries have in the education program written that programming must be part of the education in math and science. The drones could be a perfect link between FAI and schools. With the successful first Wch drone racing in China this idea is something we must work with coming years. We hope we can make some collaboration with the drone S/C in the future to discuss this matter.

I have been working with the scholarship program during the year. Coordination with the evaluation experts and collecting the evaluation experts votes for the scholarship. A big work is to try to open NAC's eyes that the scholarship exists. I try to promote it via social media, ex FB.

Per Findahl

Chairman Education Sub-committee
