

I'm Svetlana Surkova. I'm fifteen years old. I live in Russia, in the wonderful city of Yekaterinburg. I've been doing model sports since I was seven years old. The F2A cord class started in 2015.

I like this sport very much. I was able to develop my technical and creative abilities with model aircraft sports. I can make propellers and make airplane parts. I spend a lot of time training and preparing sports equipment. I have achieved the opportunity to compete in international competitions as part of the national team, which I am very happy about. I have a desire to be a leader in the F2A class. I want to continue doing model sports and connect my life with aviation. I like to design, select materials and develop technology for their processing.

I'm also interested in 3D modeling. And I have a desire to build 3D models of my developments with subsequent manufacturing, but using a CNC machine. I would be happy to receive a grant and use the money to purchase this equipment. This machine will expand my technological capabilities and speed up work on my projects.
