# Report of Contest Director

Ferencz Laszlo

## Background

When we bid for EAAC 2022 we took into consideration all Romanian Aeroclub airfields and decided that Clinceni airfield was the best solution for the contest, home base of the Romanian Aerobatic team, with newly constructed buildings and runways.

# Official Training

We had 4 days of official training before the contest, with flights starting at 0900LT each day and ending at 1900LT, except last day when had to finish by 1630LT so that we could accommodate the Official Briefing.

# Competition

We had the pleasure to host 30 competitors from 8 countries, and all programmes were flown by 29 pilots.

During the competition we placed the judges in Southern and Western positions. The Southern position was used mostly, with good access and judging conditions.

Wind measurements have been done using drone for 300 and 600 meters, for ground level we used a meteorological station from the airfield.

Weather conditions during all competition days were good, except 18.10.2022 that was day off due to strong winds >25kts. Otherwise we managed to fly continuously. Hence the closing ceremony was set two days earlier than we initially expected.

# Conclusion

We hope that the quality of organizing this event will be a good testimonial for future event bids.
